

How the Brain Works & The True Meaning of Study

~ A Guide to Intelligence and Mind for Children and Parents ~

Introduction (To Parents and Children)

"Why do we study?" "Is it to get good marks on tests?"

The true answer is not just that. Studying is a magical tool to build a **"Mental Shield"** so that no one can deceive you or take away your freedom, allowing you to live as your true self.

Chapter 1: Reading Rewires Your Brain ("Circuit Construction")

Our brains are not born with a ready-made "reading room." By practicing reading and following words repeatedly, separate areas of the brain (such as vision and language processing) connect together to build a new **"thinking circuit (cognitive network)."**

At first, just reading words feels like using up all your mental energy. But as you get used to it, reading becomes smooth, creating significant mental bandwidth in the brain's command center, the "prefrontal cortex (thinking room)." As a result, instead of emotional or impulsive reactions, you gain the ability to think calmly and logically (System 2).

Point: Brain circuits, once built, last a lifetime!

The "thinking circuits" created through repeated practice never disappear, even in adulthood. Just like practicing sports or playing a musical instrument, the more you practice, the smoother your brain's circuits operate.

Chapter 2: Scientific Data Proves "Anyone Can Grow"

You might think, "Isn't being good at studying only for special geniuses?" However, large-scale global educational data (OECD PISA survey) clearly disproves this misconception.

In countries with well-developed educational environments like Singapore, over 85% of 15-year-old students achieve high-level structural reading comprehension (PISA Level 3). This is decisive scientific evidence that you do not need to be a genius; with proper practice and scaffolding (such as finger-pointing and highlighting), anyone can achieve this level.

Chapter 3: Why Do We Study? "Study" is Your "Mental Shield"!

The true purpose of studying is not just to score 100 points on a test. It is to possess the ability (your Mental Shield) to notice on your own: "Wait, isn't something wrong here?" without falling for lies or manipulative tricks. Once you understand how the world works, no one can blindly force you into obedience, and you can protect your own freedom.

The "Magic Keys" Offered by Each Subject

Subject	"Magic Power" & Role Offered by the Subject
Mathematics / Arithmetic	The power to organize and clearly understand complex situations and difficult problems. It becomes a lifelong tool you use every day in adult society.
Language / Literacy	The power to decipher what others truly mean and express your own thoughts and feelings with accuracy and clarity. Prevents emotional outbursts and misunderstandings.
Science	The power to discover the "unchanging rules (premises)" of nature and the universe. Cultivates an eye for investigating root causes behind observable phenomena.
Social Studies	The power to understand the "inner workings (secrets)" of how our society and communities operate. Forms the foundation for making wise, unmanipulated choices.

Magic Key (Power Connected to All Learning)

Once you grasp the "knack of understanding" through school subjects, your progress in all other fields—such as music, art, sports, club activities, programming, and foreign languages—becomes dramatically faster!

Chapter 4: A Gentle Perspective That Does Not Demand Human Perfection (Fault-Tolerant Society)

Being human, people make mistakes, have misunderstandings, and sometimes lie or lose their temper. The Global Cognitive Defense (GCD) model never demands impossible standards like "perfect, error-free human beings (human sterilization)."

What truly matters is building a mutual support mechanism ("fault tolerance") so that even if someone makes a mistake, society and human relationships as a whole do not break down. If everyone develops their brain circuits gradually at their own pace, we can cover for each other's mistakes and create a safe society where no one's freedom is threatened.

In Closing: Passing the Baton of Intelligence and Hope to Children

No matter where you live in the world or what your current circumstances are, your brain will surely grow with practice. Step by step, without rushing, let us cultivate your "Mental Shield" and the keys to freedom!
